single handle faucets

50th
ANNIVERSARY
ACHIEVEMENT

50 YEARS OF SERVICE AND PROGRESS
1910-1960

A.I.A. 29-H

FIRST IN BEAUTY! FIRST IN QUALITY! FIRST IN SERVICE!

FLOW-MATIC SINGLE HANDLE Faucets are truly the crowning achievement marking Price Pfister's first half century of service! Only the skills and manufacturing methods developed through the years could design and build this superb new unit. **It is unmatched by any other single handle faucet made today!** Compare its **styling** with any others. Check its **quality** —the same high standards for which Price Pfister has become famous, and read here its engineering features, proof that FLOW-MATIC is **built to last** the life of the home!

Crowning achievement in precision engineering

- **Fingertip control** — no hand pressure required
- **Positive Off position** assures no-drip operation
- **Super-sensitive control** gives unlimited volume and temperature settings
- **Hermetically sealed valve unit** keeps it tamper-proof forever
- **Only two ceramic moving parts** work with jewel-like precision for lifetime service
- **Silt, sand and scale won't damage it** (see proof on this page)
- **Plate-type valve** gives shearing-action shutoff
- **Industry's outstanding plate seals** make FLOW-MATIC unsurpassed in performance
- **All parts precision ground and lapped** to make certain of positive finishes
- **Tested 7 times during manufacture** to guarantee perfect functioning (see testing details on this page)

Each unit tested 7 times during manufacture at 60 P.S.I. air pressure

- 1 Each body part tested separately
- 2 Spout tested
- 3 Head-to-body assembly tested
- 4 Closure pressure of valve tested
- 5 On pressure of valve tested
- 6 Spout assembly tested
- 7 Entire assembly given final test

35 years of performance proves FLOW-MATIC lifetime quality

Never before has any single handle faucet stood up **without sign of wear** under such grueling tests as these:

Tested with over 1,000,000 cycles at 180°F. water — the equivalent of **35 years** of ordinary use — and FLOW-MATIC still as good as new!

Tested over 50,000 cycles with silt and grit—a mixture of 17 parts water to 1 part silt, sand and pea gravel. During this ruggedest test **more than a ton of silt-sand-gravel** flowed through the valve with only minor signs of wear! **The valve continued to function.** These tests prove why FLOW-MATIC is truly Price Pfister's Crowning Achievement—and why you can install it with pride in knowing it will stay in service for years and years, **performing** as beautifully as it looks!

"FLOW-MATIC"

8" Topmount Single Handle Faucets

8" Cast Brass Spout and Aerator

Anti-Siphon Code Approved

Triple Chromium plated

2000 A — Less Hose and Spray

2005 A — With 48" Hose and Clear Water Spray

2010 A — With 48" Hose and "Dish-Quik" Spray

2000 A

OPERATING INSTRUCTIONS:

a. **FOR HOT WATER**—Lightly move handle forward and to the left at the same time with an easy motion. Notice the volume of flow increases as you move the handle toward the "Hot" position. This forward movement regulates the volume control.

b. **FOR COLD WATER**—Use in the same manner as for hot water, except move handle forward and to the right.

c. **MIXING OR CONTROLLING WATER TEMPERATURE**—Move handle toward hot position and then straight toward cold side until desired temperature has been reached.
